By the Numbers: FAA Says 2020 ADS-B Deadline Won't Change

Last month, *Avionics News* highlighted the results of an Aircraft Electronics Association member survey for available resources in support of the ADS-B Out mandate. The results were as expected: the industry is ready, willing and able to support the Federal Aviation Administration's mandate. But what do repair shops tell their customers?

Let's do the math. As of today, we don't have six comfortable years to equip the entire general aviation fleet of 186,000 operational aircraft. Rather, we have a little more than 1,300 workdays. As a result, we need to be upgrading more than 130 aircraft per workday; currently, we are barely upgrading 100 aircraft a month.
