Aircraft Electronics Association Plans Move to Larger Headquarters Office in Missouri

New Address, New Phone Number Effective June 21

WASHINGTON, D.C. — To meet the growing demands of a larger staff and the addition of more services and benefits to its members, the Aircraft Electronics Association is in the process of building a new headquarters office.

Located nearby its existing headquarters office, the new, 12,000-square-foot building is next to the Lee's Summit Regional Airport in Lee's Summit, Mo., a suburb of Kansas City.

"We're excited to be in a position to break ground on larger, more efficient facilities," said Paula Derks, president of AEA. Derks said she expects a move-in date in late June of this year.

"We don't expect any delay or hindrance in services we provide to the general aviation electronics industry during this transition," she said.

The new AEA headquarters will feature a state-of-the-art training classroom with a capacity of up to 100 people. The Association plans to offer customized training classes for members; work with AEA academic members on training classes; and allow AEA member companies to utilize the training classroom for their individual needs as well.

"AEA and its members will be in a class all their own with this new, state-of-the-art facility," said Mike Adamson, vice president of member programs and education for AEA.

"We took advantage of a clean-sheet design, included all of the latest instruction technologies, and developed this classroom to be an extended campus for our members. This will play an important role in growing our instructor-led training offerings as well as our development of online training."

Effective June 21, 2008, the
Association's new address is:

**Aircraft Electronics Association
3570 N.E. Ralph Powell Road
Lee's Summit, MO 64064**

The new office telephone, also
effective June 21, is: **816-347-8400.**

The AEA is planning an official grand
opening celebration and open house
during the AEA Central Regional
Meeting from Sept. 25-27, 2008, in
Kansas City, Mo.

The new AEA Headquarters building, with interior structure being designed by the Kansas City-based architectural firm of Gastinger Walker Harden, is close to the flight path of the Lee's Summit Regional Airport, near Kansas City, Mo.

The Aircraft Electronics Association represents more than 1,300 repair stations from throughout the world specializing in maintenance, repair and installation of avionics and electronic systems in general aviation aircraft. AEA membership also includes manufacturers of avionics equipment, instrument repair facilities, instrument manufacturers, airframe manufacturers, test equipment manufacturers, major distributors, engineers and educational institutions.
